Academic area	Technical
Beginning Course	2006-2007
ECTS Credits	120 ECTS
Educational Aims	The training objectives of this master course expect that pupils know the European forest market, understand the different ecological forest systems, their functioning and their implications with society and, in short, that they access to a job in European enterprises with headquarters in different countries, in the European public administration and in NGO's. For that, the objectives here set out will offer a specific training that will attribute to pupils competences in the use of computing programmes specific for forest environment; analysis and valuation of the environmental implications at their professional activity; gift for the creation and coordination of transnational work groups. The pupils will also have to acquire the capability to move themselves in different cultural contexts and know different languages, as well as the capability of keeping a continuous learning of new technological advances.
